File Download (XML)

This resource will gather and compress all the XML documents that are shown in the search, considering all listed pages, regardless of manual selection (tagged on the first column to the left). In other words, the download considers all the registries from the search and not the manual selection; once it does not apply any filters, the result will be for all the documents the system exhibits.

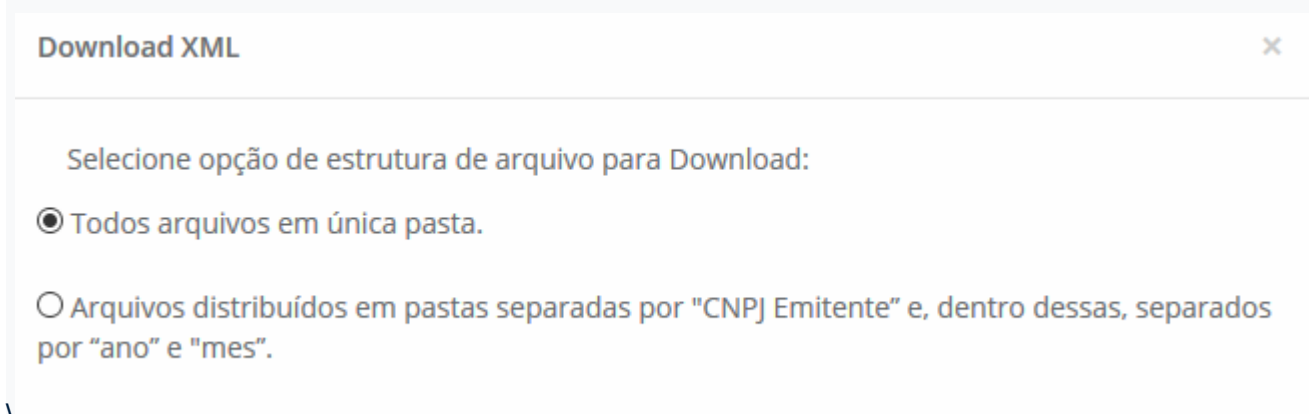

Examples:

Download in bulk:

If by clicking “Received documents”, the system registers 3.385 documents, then clicking “DFe Download”, you will receive a file with 3.385 XMLs, regardless of manual selection on the first row to the left. If any filter is applied, and the result is 29 documents, those 29 documents will be downloaded, and so on.

Every time the download is performed in bulk, you can choose the structure of your files, all in a single folder or many folders, organized by the issuer’s CNPJ and, inside each one, organized by year and month. Simply select the desired option as is shown in the following image.

Individual Download:

Find the receipt you want to download, go to the “Files” columns (scrolling to the right) and click the icon.
