

First steps

- [First steps](#)

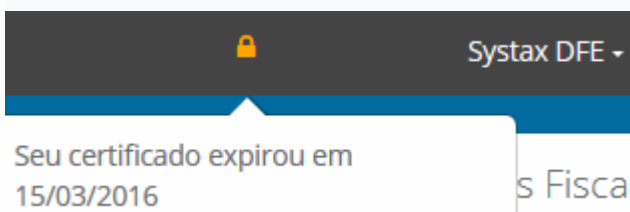

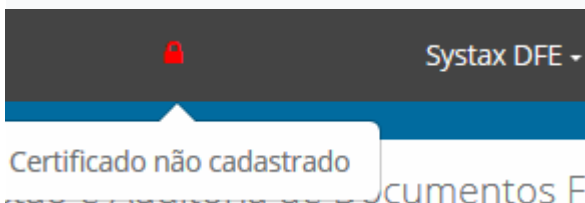

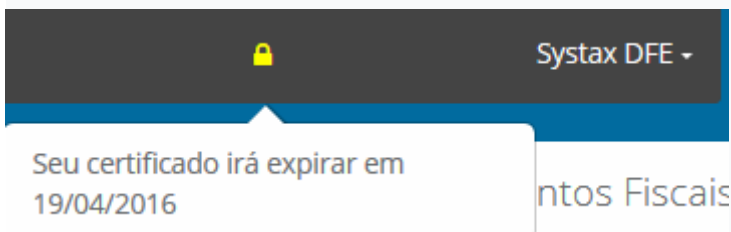

First steps

For the tool to work, registering your model A1 digital certificate is needed, so that permission is granted to the system to capture your fiscal documents. It's important to notify the DFe support after concluding this phase, so that we can activate your user's license. If the license is not activated, and it will only be activated by digital certificate, the tool will not be fully operational.

Warnings about your A1 digital certificate

Every time that you log in, check the upper right corner of the screen, next to the name of your company, for the existence of a padlock icon. If it shows up, click it, and read the status of your certificate. If the icon is absent, it means your certificate is registered and valid.
