

XML Data Extraction

- [XML Data Extraction](#)

XML Data Extraction

This resource is excellent for obtaining reports with detailed information of NFe documents in a CSV file. The user themselves can customize their report from any information that is present in the XML file, like CFOP, CST ICMS, NCM, etc. To use this resource, it's important to apply a filter, determining the range of receipts to be checked, and click the "NFe Extraction" button.

Then, the system will open a new window so the user can select the NFe items they wish to observe in the report. Click the desired fields and drag them to the board on the right.
