

NFE Report

This function allows the user to export the basic information from the DFEs to a CSV file (similar to an Excel file), allowing another option of document evaluation.

To use this function, first apply the filters for the documents you wish to export, being the requirements a period of time, searching for a specific supplier, by status, etc. Then, click the “Export CSV” button, and all the documents resulting from the applied filters will be in the generated file.

In the following example, we use the filter requirement of receipts issued between March 10th, 2016 and March 20th, 2016 (Brazilian dates are written as DD/MM/YYYY, as opposed to the American standard of MM/DD/YYYY).
